Leinfelden, august 2018

CTP meets MGB – the compact safety door protection device MGBS

Why not combine the best features from different products? Take a CTP transponder-coded safety switch, mount it on a sturdy sub plate, combine everything with a MGB handle module, and what you get is the compact safety door protection device MGBS. This is the ideal solution wherever a slimline switch housing is advantageous, such as on safety fence corner posts.

Concealed mounting holes in the handle module and lock plate protect against tampering. A lockout bar is additionally integrated into the handle module to prevent the machine from starting during maintenance or cleaning work, for example. A simple plug connection reduces wiring work.

The system is optionally available with an emergency stop device and with controls and indicators. The resulting MGBS is a slimline safety door protection device with the properties of a MGB.

Thanks to the transponder technology, the system achieves category 4 / PL e according to EN ISO 13849-1, without additional fault exclusion. It complies with all the requirements of EN ISO 14119. With its high degrees of protection IP 65, IP 67 and IP 69K and a locking force of 3,900 N, the MGBS is an all-rounder for demanding environments.

EUCHNER – More than safety.
