

EUCHNER SAFETY SERVICES

Safety concept

The danger zones and their respective risks are known after a risk assessment. Specific measures are now defined to minimize the risk for each zone. The individual risk reduction measures are shown based on a machine overview. EUCHNER commits itself to the benefit of the customer, assuring strict neutrality in the selection of safeguards. We work closely with our customers to develop the safety concept, and offer a technically and economically ideal solution. Implementing the safety concept not only increases the safety of the machine, but can also increase machine availability and even productivity.

Advantages for the customer

- ▶ Our safety experts develop a technically optimized safety concept tailored to the customer's needs
- ▶ We are committed to our customers' interests and to maintain neutrality throughout the consultation

- ▶ Laws and standards are the cornerstones of our business. We always work to the latest versions
- ▶ We ensure compatibility of the documentation systems

Services for the customer

We develop the safety concept for the respective machines. Our customers receive an offer for these services based on the following measures:

- ▶ The risk reduction measures are shown based on a layout. Development of protection for the respective danger zone using state-of-the-art mechanical, electrical, electronic, pneumatic and hydraulic technologies
- ▶ Technical documentation for the respective solution
