

EUCHNER SAFETY SERVICES

Safety assessment

A frequently asked question concerns the safety qualification of an existing machine or its parts. To answer this question, the most important hazards posed by the machine or the machine installation part are recorded, and their safety classifications are traced based on the existing documentation or are determined again. Existing safeguards are examined for compliance with standards.

At the customer's request, the examination can be extended to the system's electrical, pneumatic and hydraulic safety functions as well.

Advantages for the customer

- ▶ High quality of inspection by experienced employees and a refined expertise matrix system
- ▶ The safety assessment updates the customer's machine documentation

Services for the customer

- ▶ Agreement on the type and scope of the safety assessment
- ▶ Expert examination of existing safeguards
- ▶ Detailed report in compliance with current standards
