

## EUCHNER SAFETY SERVICES

## Hazard assessment according to the Use of Work Equipment Directive 2009/104/EC

The Use of Work Equipment Directive 2009/104/EC governs the provision of work equipment by the employer and its use by the employee. The employer must regularly determine all workplace hazards that could impair the employee's health and safety and must take measures to limit these hazards. The regular checking period depends on the hazard level, and it is specified more precisely in the German Technical Rules for Operating Safety (TRBS).

Consequently, a hazard assessment must be performed for every workplace in a company. Standardized assessment schemes are used for determining the hazards for reasons of comparability, completeness and efficiency.

### Advantages for the customer

- ▶ EUCHNER has developed an efficient and complete scheme for assessing hazards at production workplaces, and is highly experienced in its use
- ▶ EUCHNER advises customers about suitable measures to limit hazards and reduce risks

- ▶ Experience in preparing and archiving hazard assessments

### Services for the customer

- ▶ Agreement about the type and scope of hazard assessments
- ▶ Agreement with the archiving and monitoring systems
- ▶ Determination of the standards valid in the customer's applications
- ▶ Implementation of the hazard assessments in accordance with an agreed schedule, as well as checking for compliance with standards
- ▶ Preparation of an action plan
- ▶ Final documentation and handover
